

# Managing Work, Home and Risk in the Cloud

March 20, 2013

Cloud technology is here to stay

## Featuring IS Outsource

Ten years ago, home and work were highly separated from a technology standpoint. The cloud has triggered an ***unexpected merger of personal and business data***, blurring the lines between the two worlds.

Whether you're thinking about cloud technology or have already made the move, this program will help ***prepare and protect*** your business and your employees.
